

MARS

April 15, 2016

Yearbook

Responsive Web Design UX 1.0 Generated for Apple iPhone 5 / 6 / 6+

by Eric M. Scharf

for the HTML5 container-based
Yearbook mobile calendar app for the

MARS

digital
Experience
team

digital
Workplace
group

Objectives:

- 1) Create a self-service-centric calendar app solution** that lessens the burden on the global support team and empowers users to automatically generate new calendars and manage their own bulk uploading of event details.
- 2) Combine multiple legacy, internal-facing calendar app solutions into one robust platform** upon which all Mars business units can easily create and manage their own calendar 'layers' and custom event content.
- 3) Design a solution that allows the simultaneous viewing of events from multiple, competing calendars** within both traditional and non-traditional calendar layouts.

Viewing NOTE: Blue-highlighted elements are specific to current or pending system / user interactions.
